

Guardrail Inventory Inspection Study

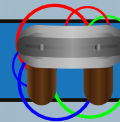

Service Provided

MasterMind will drive each route inventorying and inspecting all guardrail assemblies. All data collected is reviewed to ensure work items are placed where corrective measures are recommended. The Guardrail Inventory study information is delivered as a comprehensive report of all inventoried and inspected guardrail assemblies along with recommended work orders to ensure best possible service.

Reports

- Route Report
- Work required summary - by route totaled for all routes
- Graphical report - by route - with control points and guardrail information
- Detailed guardrail report

Software

The Guardrail Inventory study is available with the MasterMind RailMaster™ software module. All guardrail information will be loaded into the RailMaster™ software upon delivery. This ensures all information to be concise and uniform throughout the study. Customizable reports can be generated with the RailMaster™ software module.

Benefits

- Comprehensive inspection and inventory of every assembly
- Help develop your budget based on accurate summary reports
- Identify unneeded guardrail, guardrail needing replacement, and guardrail not meeting MUTCD specifications
- GIS based 360° HD Street Level Video Imagery allows instant viewing of guardrail
- Reduce agency liability exposure
- All curves and curve signs are located using GPS coordinates and milepoint for easy locationing
- Recommended work items allow you to prioritize work, schedule maintenance crews, and quickly initiate field work
